

Context

A living map of how your company actually works — every process, decision, and workaround — so AI can act on what your best people already know.

[See How It Works →](#)[Talk to Our Team](#)

Klarity

Klarity

A Context Graph is a living, AI-readable map of how an organization actually operates — every process, decision, and workaround, captured across every team. It is the foundation enterprises need to deploy AI that acts with judgment instead of hallucination.

It's your organization's digital twin, built at a depth and scale that wasn't possible before AI could do the capturing.

L1 **STRUCTURED**

Structured data.

CRM, HRIS, ERP, ITSM. The structured backbone — clean rows, clean APIs. AI can already read this. It's the smallest part of how your organization actually works.

Klarity

Unstructured data.

Decks, emails, memos, contracts, documents, messages. The layer where the real work lives — but it's scattered, unindexed, and your AI can't reason across it.

Decks

Emails

Memos

Contracts

Documents

Messages

L3 **TRIBAL KNOWLEDGE**

How people actually work.

The Tuesday standup. The reason the CFO approved one vendor. The workaround the team built because the documented process doesn't work. None of it emits a signal — until Klarity captures it.

Decisions

Judgment

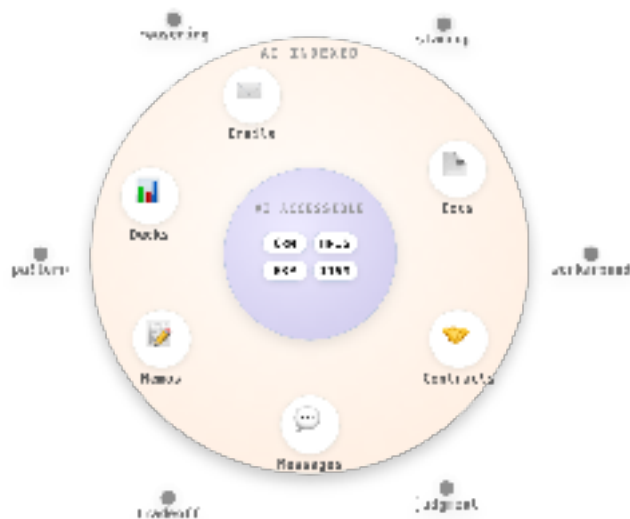

Workarounds

Reasoning

Authority

Patterns

L4 AGENTS

Agents need access to all of it.

Not just systems. Not just docs. Every layer. The Context Graph hands agents the same picture your best people carry in their heads — so they act with judgment, not hallucination.

Klarity

YOUR ENTERPRISE RUNS ON FOUR LAYERS. THE FIRST THREE ARE HOW YOUR PEOPLE WORK. THE FOURTH IS HOW YOUR AI INHERITS ALL OF IT.

03 THE PROBLEM

Human reasoning *doesn't emit data.*

Every AI system runs on context — logs, clicks, transactions, tickets. But the most valuable organizational knowledge never becomes data at all. The judgment call made in a Tuesday standup. The reason a CFO approved one vendor over another. The workaround a team built because the documented process doesn't actually work.

None of it emits a signal. None of it lands in your systems. And none of it is available to your AI.

Klarity

“The most valuable organizational knowledge never becomes data at all.”

KLARITY DISCOVERS IT EFFORTLESSLY — AND THE COMPANIES GETTING REAL AI ROI HAVE ALREADY FIGURED OUT WHY THAT MATTERS.

04 THE INSIGHT

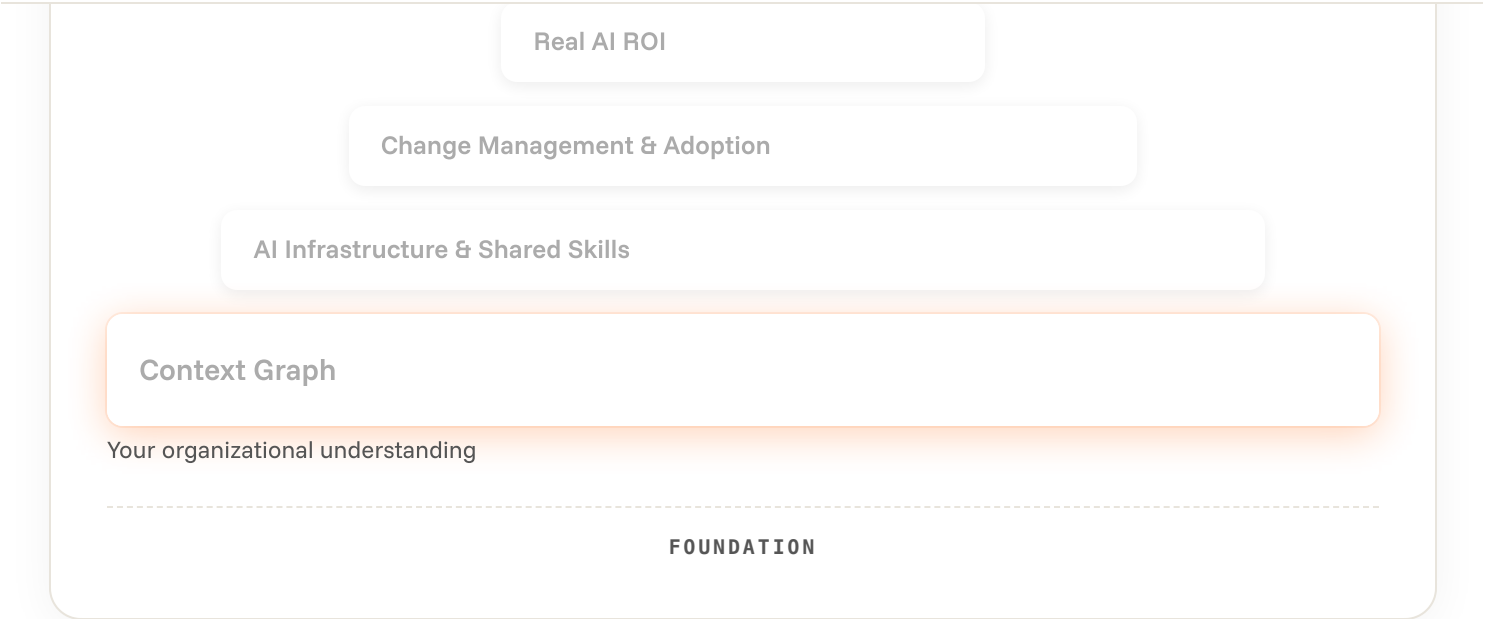

Every Successful AI Transformation Starts Here

Companies getting real AI ROI built a deep, living map of how their organization actually operates — before deploying AI into it. You can't transform what you don't understand.

Map how people actually do work, how decisions get made, how approvals flow — across every role, every team. That map shows you where AI creates value, where shared AI skills deploy broadly, and where change management drives real daily adoption.

Without it, you're deploying AI blind. With it, every initiative is faster, more targeted, and sticks.

Klarity

WHAT KLARITY HAS UNCOVERED

Klarity

more processes surfaced than documentation alone

3 days

to first Context Graph

2,400+

decision nodes captured per discovery cycle

WHICH IS WHY THE OLD TRANSFORMATION PLAYBOOK CAN'T GET YOU HERE.

05

A NEW APPROACH

Why the old transformation playbook can't get you here.

The traditional approach samples a handful of stakeholders, hands over a deck, and stops. The deck is outdated the day it ships, change management is bolted on at the end, and most of how the company actually works never made it onto a page. What you actually need looks nothing like a transformation engagement. It looks like infrastructure.

BEFORE

Klarity

CURRENT STATE → FUTURE STATE → CHANGE MANAGEMENT

- 01 Samples a handful of stakeholders, misses the full picture
- 02 Static snapshot, outdated on delivery
- 03 Change management bolted on at the end

 NOW — WITH KLARITY

What You Actually Need

CONTINUOUS · COMPREHENSIVE · EMBEDDED

- 01 Full-depth capture across every role, every team, every individual — not a sample
- 02 A living map that updates as your work evolves, your people adapt, and new AI capabilities come online
- 03 Change management embedded from day one — with AI agents that coach adoption in real time

SO HERE'S HOW KLARITY ACTUALLY BUILDS ONE.

 06 HOW WE BUILD IT

Klarity

Klarity builds your Context Graph in three motions, delivered by specialized AI agents — running continuously, across every team, at a depth no manual process matches.

STEP 01

Discover.

AI agents work alongside your people at scale — capturing how work gets done, in real time, at a depth no manual process matches.

STEP 02

Structure.

Everything organized into your living Context Graph — structured, navigable, always current. Evidence, not hypothesis.

STEP 03

Improve.

Surface the highest-value opportunities. Agents coach your teams on AI adoption. As capabilities evolve, the cycle runs again.

On repeat, indefinitely. AI doesn't stop evolving — neither does your Context Graph.

Klarity

07

INSIDE STEP 01 – THE AGENTS DOING THE DISCOVERY

Two agents. One living knowledge map.

Discovery is where the depth comes from. Two agents work in parallel — each capturing a different layer of how your enterprise actually operates. While they run, Klarity also indexes your existing documents, SOPs, and artifacts — connecting what's written to what's real.
